Dogecoin CryptoBill Instructions:

1. To send funds to your Dogecoin CryptoBill, you will either need to mine them or purchase them on an exchange. Once you have your hands on some DOGE, you can send them to your CryptoBill by scanning the "PUBLIC KEY" QR code. If you intend to hold HODL the DOGE that you sent to your CryptoBill, you can stop here. Just make sure you store it in a secure location, so nobody ever has access to your private key.

2. When you would like to use your Dogecoin, or conveniently check it's price in an app, simply scratch off the private key QR code with a coin or other small, hard object. Make sure you keep the private key hidden from preying eyes - a bad actor with access to your private key has access to your funds.

3. Dogecoin has no phone application that will let you sweep private keys, so head over to https://my.dogechain.info/ on your mobile phone.

4. Once the page has loaded, select "Redeem Paper Wallet" on the far right. It should prompt you to enter the "Private Key".

5. Still on your mobile phone, open your camera application, or a QR code scanning application, and scan the Private Key QR Code. A string of numbers and letters should appear. Copy down the string and paste it into the dialogue box. Make sure you leave the webpage open, as we will be headed back there later.

6. Once you have pasted your Private Key into the dialogue box, it will ask you where you want to send them. This is where you download the phone application. Head to the app store and download "Multiwallet by Freewallet".

7. Once the application has downloaded, open it up and click "login/sign up via email". Make sure you have selected "Create wallet" on the next screen and enter your email. A strong password is recommended, which you should store in a secure location.

8. It will then ask you for more identifying information, including your name. It is recommended to leave the name portion blank. You will also need to confirm your email address.

9. Once you are inside Multiwallet, select "Receive" from the bottom selection bar. Then select "DOGE". It will then prompt you with your Dogecoin Deposit Address. Go ahead and copy this address by clicking on it, and head back to https://my.dogechain.info/.

10. Once on https://my.dogechain.info/, paste the Deposit Address that you just copied from your app into the "Send my funds this address" box. Then, select "Sweep paper wallet". The Dogecoins will now be sent from your paper wallet to your phone. Please note that a small transaction fee will be incurred.

11. If you ever wish to send more Dogecoin to your paper wallet, you can scan the "PUBLIC KEY" QR code located on the right side of the bill.

12. Most important step. HOLD ON TO YOUR DOGECOIN.
