

Ethereum CryptoBill Instructions:

1. If you would like to send Ether to your Crypto Bill before giving it, scan the public key QR code with the Ethereum wallet of your choice. Then, send the desired amount of ETH to the associated public key.
2. Give this gift of crypto just like you would give cash, and it's ready to use.
3. Next, download the free app "CoinSpace Wallet" from the App Store.
4. Once CoinSpace has been downloaded, select the "Create new wallet" option. Next, click generate passphrase.
5. Write down the passphrase that it has generated, preferably on this paper for maximum security. If you would like to save paper, we have provided the same section on the Instructions Card included in your order. Once you have written it down, click on the "I have written down or otherwise securely stored my passphrase" button. **Read** then agree to the terms and conditions.
6. Now click "Set your PIN", and choose a PIN that you will remember. If you would like, you can write it below.
7. Do NOT click the "Remove ads" pop up that will greet you on the next screen.
8. Now you are on the home screen. Head over to the far right side where it says "Tokens", and select "Ethereum". It may prompt you for your PIN number again.
9. Once you are inside your Ethereum wallet, head over to the settings icon in the top left corner of your screen. Once in your settings, there is an option to "Transfer paper wallet/private key". Click that.
10. A new dialogue box will appear. Click on the QR code symbol on the right side, and it should open your camera app.
11. Scan the left side of your ETH Crypto Bill, the "PRIVATE KEY", with the CoinSpace app. Once scanned, select "Transfer". Once the transfer has been completed, please keep your CryptoBill in a secure location, preferably a safe. A bad actor with access to your private key has access to your funds.
12. Click "Send", and now you are done! Note that a small transaction fee will be incurred. You have now transferred the Ethereum from the CryptoBill onto your phone, where you can conveniently check its price.
13. If you ever wish to send more Ethereum to your CryptoBill, you can scan the "PUBLIC KEY" QR code located on the right side of the bill.
14. The final step is a security check. If you have revealed the private key on your CryptoBill and would like to hold onto the bill, **you must keep it in a secure location**. Furthermore, if you have written down your passphrase and/or PIN number on this page, **you must keep it in a secure location**.
15. Most important step. HOLD ONTO YOUR ETHEREUM.

Optional:

Passphrase:

PIN:

Notes:
